Project Proposal

Hotel Management and Smart Room Booking System

1. Description

The **Hotel Management and Smart Room Booking System** is a modern web-based application designed to automate hotel operations and simplify the room booking process for customers. Traditional hotel management systems rely heavily on manual record keeping, which can lead to errors, inefficiencies, and time-consuming processes.

This system provides a **digital platform where customers can search for rooms, check availability, and book rooms online**. At the same time, hotel administrators can efficiently manage rooms, bookings, payments, and customer information.

The system aims to improve **customer experience, operational efficiency, and data management** for hotels.

2. Problem Statement

Many small and medium hotels still use **manual systems** such as paper records or spreadsheets to manage bookings and customer data. These traditional systems create several problems:

- Difficulty tracking room availability
- Risk of double booking

- Time-consuming booking process
- Poor customer experience
- Lack of centralized data management
- Limited reporting and analytics

The proposed system will solve these issues by providing an **automated and intelligent booking system**.

3. Objectives

The main objectives of this project are:

- To design and develop an **online hotel management system**
 - To allow customers to **search and book rooms online**
 - To maintain a **centralized database of rooms and customers**
 - To manage bookings, check-ins, and check-outs efficiently
 - To provide **real-time room availability**
 - To generate **reports and analytics for hotel management**
 - To improve hotel service efficiency and customer satisfaction
-

4. Scope of the System

The system will support the following operations:

- Customer registration and login
- Online room searching and booking
- Room availability tracking
- Payment processing
- Booking management
- Customer data management
- Administrative control panel

The system can be used by:

- Hotel administrators

- Reception staff
 - Customers
-

5. System Modules

1. User Registration and Login

Customers must register before booking rooms.

Features:

- User registration
 - Secure login authentication
 - Password encryption
 - Profile management
-

2. Room Management Module

This module allows administrators to manage hotel rooms.

Features:

- Add new rooms
- Edit room details
- Delete rooms
- Set room type
- Set room pricing
- Manage room availability

Room Types Example:

- Single Room
- Double Room
- Deluxe Room
- Suite Room

- Family Room
-

3. Room Booking Module

Customers can easily book rooms through the system.

Features:

- Search rooms by date
- Filter by price and type
- View room details
- Book room instantly
- Booking confirmation notification
- Booking history

Smart features:

- Automatic availability checking
 - Prevention of double booking
 - Instant booking confirmation
-

4. Customer Management Module

Admin can manage all customer information.

Features:

- View customer profiles
 - Update customer information
 - View booking history
 - Manage customer feedback
-

5. Payment Management Module

Handles all payment related operations.

Features:

- Online payment
- Payment confirmation
- Invoice generation
- Payment history tracking

Payment Methods:

- Credit/Debit Card
 - Online Banking
 - Digital Wallet
-

6. Check-In and Check-Out Management

This module helps hotel staff manage guest arrivals and departures.

Features:

- Guest check-in process
 - Guest check-out process
 - Automatic room availability update
 - Stay duration tracking
-

7. Review and Feedback System

Customers can provide feedback after their stay.

Features:

- Room rating system
- Customer reviews
- Feedback analysis
- Service improvement suggestions

8. Notification System

The system will send notifications to users.

Notifications include:

- Booking confirmation
 - Payment confirmation
 - Booking reminders
 - Promotional offers
-

6. Features

1. Smart Room Recommendation

The system suggests rooms based on:

- Customer preferences
- Previous bookings
- Budget

2. Real-Time Room Availability

Users can see **live room availability**.

3. Dynamic Pricing

Room prices may change depending on:

- Demand
- Season
- Special events

4. Admin Dashboard Analytics

Admin can view:

- Total bookings
 - Revenue reports
 - Most booked room types
 - Occupancy rate
-

8. Technologies Used

Frontend

- HTML
- CSS
- Tailwind CSS
- JavaScript
- React.js

Backend

- Node.js
- Express.js

Database

- MongoDB / MySQL

Other Tools

- GitHub
 - VS Code
 - Postman
-

9. Expected Benefits

- Faster booking process

- Reduced manual work
 - Improved customer satisfaction
 - Efficient hotel management
 - Accurate data storage
 - Better decision making with reports
-

10. Conclusion

The **Hotel Management and Smart Room Booking System** will provide a modern and efficient solution for managing hotel operations. It will help hotels automate their services, reduce errors, and provide customers with a convenient and fast room booking experience.
